TASK DESCRIPTION:

To develop a Compelling Landing page. It gives about the details of the Travelling Agency to book a trip. In this web Page, I used HTML and CSS to give a better look to the web page.

STEPS TAKEN:

- First, I created a index.html file.
- And then I created lp.css file.
- Now after creating these files, I coded about the responsive web page.
- While checking through html file on the browser, if the effects are not working, I again rechecked my CSS file which gives effective to html.
- By decoding all the errors, at last I created a Landing Page.

CHALLENGES FACED:

While creating the responsive web page, I faced some of the challenges. They are:

- While using hover button, some times it is not getting effective.
- Also, by inserting images.
- When replacing the box-sizing.
- When padding and creating margins.

SOLUTIONS IMPLEMENTED:

1. By using CSS properties and values to the hover button.
2. For Inserting image, I first inserted the background image, size, colour and then image is inserted perfectly.
3. By fixing the certain padding and margin values.

LEARNINGS:

- I learnt how to fix the properties of CSS while creating CSS file.
- I learnt where to keep the fixed properties in CSS file which gives correct webpage.
- Also, I learnt to code accordingly through the outcome of html file in the browser.

Project Update:

Now everything is fine according to the requirements of the task. I think I had completed the task effectively fulfilling all the requirements. The Complete Web Page is responsive and is effectively created.
